EXPERIENCE

Cloud Platform Engineer

Mar. 2026 – Present

Tokio Marine HCC

Houston, TX

Associate Cloud Platform Engineer

Jan. 2025 – Mar. 2026

- Developed and operationalized a multi-agent automation pipeline to detect, classify, remediate, and audit cloud security misconfigurations, including CI/CD-driven deployments, post-deploy validation, continuous monitoring, and automated change/audit artifact generation.
- Migrated containerized workloads from Amazon EKS to ECS with Fargate, delivering 88% lower monthly infrastructure costs and a 100% reduction in cluster management effort, saving 160+ engineering hours per quarter and reducing developer operational overhead.
- Designed and implemented an event-driven backend automation enabling CloudTrail object-level logging for 700+ S3 buckets containing PII/PHI, reducing Wiz medium findings by 80% while cutting S3 audit logging costs by ~92% (from ~\$180K/year to ~\$15K/year) through selective enforcement.
- Performed large-scale IAM role analysis across 10,000+ roles, identifying never-used roles and roles older than one year, and drove deletion of obsolete roles (30%) from production to reduce attack surface and operational risk.
- Built and scaled an automated metadata-enrichment service (AutoTag) deployed across the organization, applying standardized ownership and application tags to newly created resources through event-based processing and centralized rollout.

Security Analyst I

Mar. 2024 – Dec. 2024

Tokio Marine HCC

Houston, TX

- Built automation scripts to collect and transform security telemetry from third-party systems, producing normalized outputs for reporting and remediation workflows.
- Implemented recurring jobs with validation and error handling to support continuous posture monitoring and reduce manual operational effort.

Software Engineer Intern

June 2023 – Aug. 2023

Tokio Marine HCC

Houston, TX

- Implemented RESTful API endpoints and integration logic to support business workflows, including request/response contracts, validation, and error handling.
- Contributed to modernization efforts by extracting functionality from a legacy monolith into service-oriented components to improve maintainability and enable incremental migration.
- Worked within an API-first architecture that used backend proxy patterns to route and secure service calls across internal services.

EDUCATION

The University of Texas at Dallas

Richardson, TX

Bachelor of Science in Computer Science

Aug. 2020 – May 2024

PROJECTS

Q Chat | *Node.js, Express, WebSockets, React, AWS*

- Built a multi-user chat interface for Amazon Q CLI by wrapping CLI execution behind a Node.js/Express service and streaming responses to the React frontend over WebSockets.
- Implemented per-user session isolation and lifecycle management (1-hour idle timeout + auto-cleanup), preventing cross-user state leakage and orphaned processes.
- Designed robust auth/session handling with AWS SSO (IAM Identity Center), including token-expiration monitoring and proactive re-auth flows to avoid mid-session failures.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, SQL (PostgreSQL, MySQL, SQL Server), HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express, Flask, FastAPI, FastMCP, Strands, Bootstrap, Tailwind

Cloud & Infrastructure: AWS (ECS, EKS, Bedrock, etc.), Terraform, CloudFormation

Developer Tools: Git, Firebase, Vercel, Docker, Kubernetes, GitHub Actions, CI/CD
